

MOBILEDAY FOR ENTERPRISE

A CONTROL PLANE WITH SUPERIOR USER EXPERIENCE

MobileDay's universal interface is the starting point for all calls and online meetings.

Our low-friction, sticky UI gives an unparalleled user experience while allowing the app to act as an interaction gateway.

MULTIPLE PLATFORMS SHARE ONE SPACE

With MobileDay, users never have to leave the app. They can move uninterrupted through different conference platforms.

With MobileDay as a call hub a multitude of different technologies can be controlled within one interface.

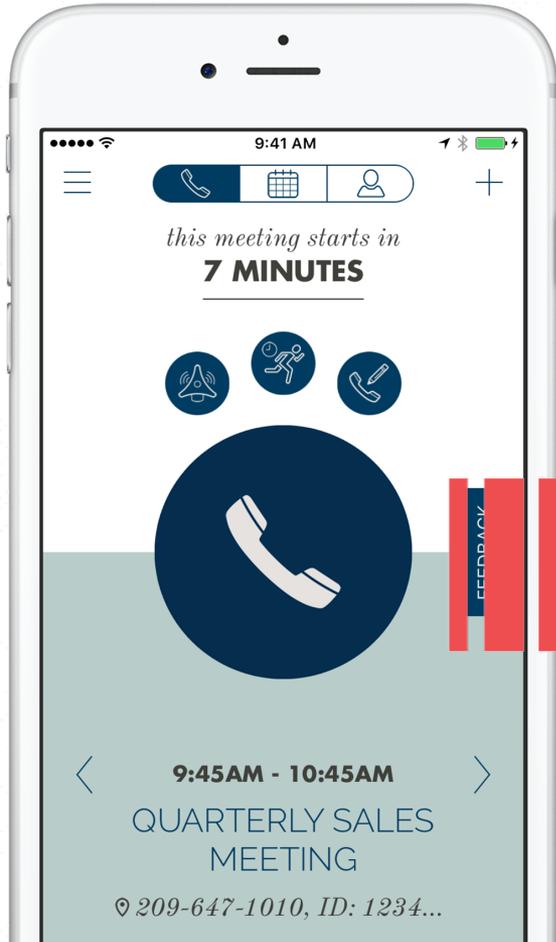

POWERFUL ROUTING

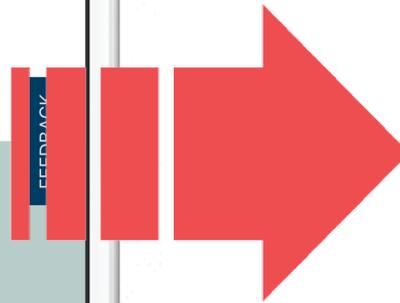

A call or online meeting is an object that MobileDay can route to any device, carrier, or application. MobileDay can intelligently dispatch calls over a proprietary network or apply dialing rules based on policy or user behavior without compromising or altering the end user's experience.

EXCLUSIVE TECHNOLOGY: PUSH

Extend the one-touch experience by combining keyword recognition and GPS technology to locate and connect with nearby devices.

WI-FI CALLING

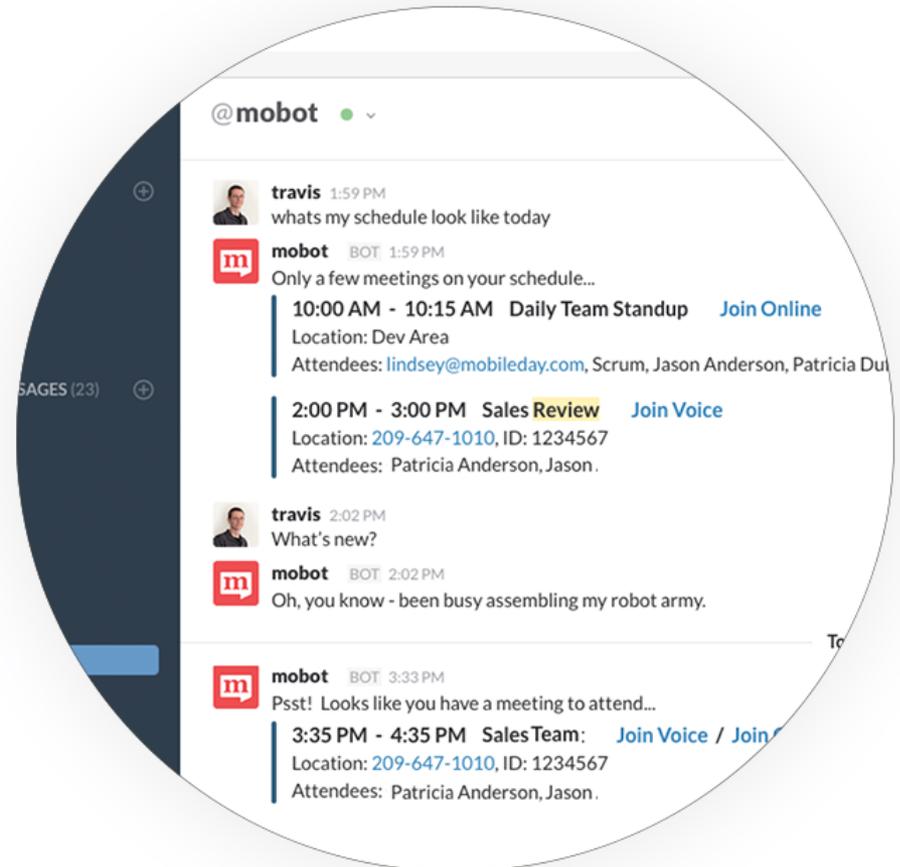

OTT is the future and we do it now. All conference calls can be intelligently routed over Wi-Fi. An integrated soft dialer allows the end user to make unlimited Wi-Fi calls on demand.

DESKTOP INTEGRATION: SLACK

MobileDay's Slack integration utilizes Slack's increasingly popular communication platform to provide users with a desktop conferencing solution.

Users can interact with their calendar and initiate conference calls with individuals or entire channels—all from within Slack.

MOBILEDAY USER DATABASE

MobileDay can provide granular mobile workforce call metrics that many corporations and large companies have been relying on from land lines for years. A revolutionary solution in the midst of a changing digital landscape.

MOBILEDAY USER DATABASE

FEATURE & APP STATISTICS

Retrieves user's work email domain, device type, conference call number, call duration, and geographical location

ENTERPRISE METRICS

Among others, MobileDay tracks the following data points: call route, geographic location, carrier, phone model, email domain, network, company...
